

Lincoln County Area Technology Center News

School Programs Available

Welcome back to a new school year! We have exciting things that will be happening at our school this year and are glad you are or will be a part of them!

Lincoln County Area Technology Center proudly offers our students a variety of different programs, in which they may choose to participate. These programs have pathways that will lead students to an industry certification for the work force, and will also prepare them to further their education if they choose to do so.

Our programs are: Computerized Manufacturing and Machining, Health Science, Industrial Maintenance Technology, Information Technology, and Wood Manufacturing Technology. Each program offers an industry certification for students who are concentrating on a pathway in that program.

At Lincoln County Area Technology Center, our goal is to prepare students for college and/or the work force. We do this by working with every student, in every classroom, every day to attain the goal of college, career and citizenship ready for all of our students.

Information Technology

The Information Technology (IT) program includes tracks in Information Support and Services, Network Administration, Web Development/Administration, and Computer Science. A core for each of these tracks includes Computer Literacy that will allow the students to develop a basic understanding of the power of technology and where it can lead us going forward.

The Hardware/Software component of IT prepares students for the highly recommended A+ Certificate that is highly recommended by the industry. It offers students the opportunity to earn a credential demonstrating basic competency in the area of computer hardware and software. The certificate consists of one course that prepares students for the CompTIA A+ certification exams which are recognized by the computer industry around the world. It gives those who are unable, or do not need to complete a degree a way of demonstrating their level of proficiency.

Just like the A+ Certificate, the Net+ Certificate offers students the opportunity to earn a credential demonstrating the fundamentals of computer networking. This certificate consists of the core skills that students need to effectively build and maintain computer networks. In addition, this certificate will provide a way for professionals currently in the industry to update their computer networking skills and for new students to show progress in the CIT program. The Net+ Certificate prepares students for the CompTia Net+ exam which is recognized by the computer industry around the world.
